

ABSTRACT OF THE DISCLOSURE

The present invention is to provide the multi-domain system IPS (In-Plane Switching mode) liquid crystal display which has high contrast and does not have an improper image display. According to an aspect of the present invention, there is provided a black matrix formed between a pair of substrates and formed over a plurality of drain lines and gate lines, a plurality of spaces arranged under the black matrix, wherein a plurality of liquid crystal molecules lined to a boundary direction of the black matrix in "OFF" state, and having a first group and a second group in "ON" state, wherein a switching angle of the second group is opposite to a switching angle of the first group.
